

Factory Mutual Approvals Canadian Standards Association

**Product Listing
(For Use in Hazardous
[Classified] Locations)**

For Professional Radio® Models

Intrinsically Safe Factory Mutual (FM) Approval labels and Canadian Standards Association (CSA) Approval labels are attached to the radio to identify the unit as being FM/CSA Approved for specified hazardous atmospheres. These labels specify the hazardous Class/Division/Group along with the part number of the battery that must be used. Their Approval marks are shown above.

The hazardous location ratings are divided into Class, Division, and Group to indicate the existence of flammable gases or vapors, ignitable dust, fibers, or filings under normal or unlikely conditions of operation.

The Professional Radio models and super tanapas listed in the first table, when properly equipped with the approved batteries listed in the Batteries table (page 7), are FM/CSA approved as intrinsically safe for use in Classes I, II, and III, Division 1, Groups C, D, E, F, G. They are also approved for nonincendive use in Class I, Division 2, Groups A, B, C, D. Temp Code T3C

MOTOROLA, the Stylized M Logo, and Professional Radio are registered in the U.S. Patent & Trademark Office. All other product or service names are the property of their respective owners.

Note: The following radios and accessories are approved as intrinsically safe by Factory Mutual Approvals and the Canadian Standards Association. Refer to the radio label for intrinsic safety ratings and required batteries. Only the accessories and antennas listed below may be used on approved radios:
